

ApniLeap Mini-Project Portfolio Portal

Demo Credentials, Project Creation & Dashboard Input Guide

Portal URL: <http://localhost:4000> | Jira Cloud: <https://apnileap-portfolio.atlassian.net> | Default Password: Demo@12345

1. Institutional User Accounts & Demo Credentials

All seeded accounts use password: **Demo@12345**

Role	Login Email	Password	Key Scope & Permissions
Platform Administrator	admin@apnileap.org	Demo@12345	Full system config, policy, cross-institutional governance.
Global Programme Leader	gpl@apnileap.org	Demo@12345	Cross-institutional portfolio status & review oversight.
Dean / Principal	kle.dean@apnileap.org	Demo@12345	Institutional project oversight, RAG approvals, project creation.
Head of Dept - CSEAI	kle.hod.cseai@apnileap.org	Demo@12345	CSEAI project creation, mentor allocation, review approvals.
Head of Dept - CSE	kle.hod.cse@apnileap.org	Demo@12345	CSE department project creation, mentor reviews.
Faculty Mentor	sujata.kotabagi@kletech.ac.in	Demo@12345	Mentored projects, KPI & challenge updates, Kanban tasks.
Student Account	01fe23bcs001@kletech.ac.in	Demo@12345	Workspace access, task movement, challenge submission.

2. How Higher Authorities Insert a New Project

- **Step 1: Sign in with a Governance Account:** Log in at <http://localhost:4000> with kle.hod.cseai@apnileap.org or kle.dean@apnileap.org (Password: Demo@12345).
- **Step 2: Navigate to Department & Theme:** Go to Departments -> Computer Science and Engineering (AI) -> Edge AI & Computer Vision, then click '+ Add Project'.
- **Step 3: Enter Project & Team Details:** Fill in the title, artefact title, mentor name, academic year, semester, and 4 student team members.
- **Step 4: Automatic Jira Cloud Provisioning:** Click 'Save Project'. ApniLeap automatically provisions the Jira project, creates the Kanban board with project location, shares filter permissions with all logged-in users, and seeds starter tasks.
- **Step 5: Verify on Dashboard & Jira:** Click '[Jira Kanban Board]' on the Project Dashboard or Workspace to see the live board on Jira Cloud.

3. Ready-to-Copy Demo Project Input Data

Form Field	Input Value to Copy & Paste
Project Title	Real-Time Edge AI Vision for Automated Defect Inspection
Artefact Title	Automated Industrial Vision Defect Inspector
Academic Year	2026-27
Semester	Sem-5
Faculty Mentor	Dr. Sujata Kotabagi

Student 1 (Lead)	Aditya Kulkarni SRN: 01FE23BCS951 Div: A Sem: Sem-5
Student 2	Pooja Patil SRN: 01FE23BCS952 Div: A Sem: Sem-5
Student 3	Siddharth Joshi SRN: 01FE23BCS953 Div: A Sem: Sem-5
Student 4	Sneha Hegde SRN: 01FE23BCS954 Div: A Sem: Sem-5

4. Sample Challenges & Corrective Actions (For Dashboard Input)

Paste these items under **Project Tracking -> Challenges & Actions**:

Challenge 1: GPU memory exhaustion during batch training
Root Cause: Full-resolution uncompressed video frames loaded simultaneously into host VRAM. Impact: Training process crashes during epoch transitions. Support Required: Lab admin access to configure PyTorch CUDA memory allocator. Action: Implement streaming DataLoader using PyTorch IterableDataset and dynamic resizing. Owner: Aditya Kulkarni Status: IN_PROGRESS Due Date: 7 days from today
Challenge 2: Multi-tenant model inference latency exceeding 50ms SLA
Root Cause: Concurrent inspection requests queue on single GPU stream without dynamic batching. Impact: Factory defect detection lags behind conveyor belt speed. Support Required: Provision Triton Inference Server with NVIDIA TensorRT runtime. Action: Deploy Triton dynamic batch scheduler to coalesce requests into micro-batches of 8. Owner: Pooja Patil Status: OPEN Due Date: 5 days from today

5. Sample Key Performance Indicators (KPIs)

Paste these items under **Project Tracking -> KPIs**:

KPI Name	Target	Unit	Description & Sample Measurement
Defect Detection Latency	45	ms	Total camera-to-classification duration. Sample Measure: 38.2 ms (TensorRT benchmark on Jetson Orin Nano).
Mean Avg Precision (mAP@0.50)	92.5	%	Scratch/crack detection accuracy. Sample Measure: 94.1% on 1,200 annotated test images.
Camera Throughput	60	fps	GStreamer hardware-accelerated decoding. Sample Measure: 62.4 fps continuous stream.
Edge Device Power	15	Watts	Maximum load power dissipation. Sample Measure: 12.8 Watts via jtop telemetry.
